The evidence at a glance

53,411
studies, 2010-2026

184
countries or territories with at least one study

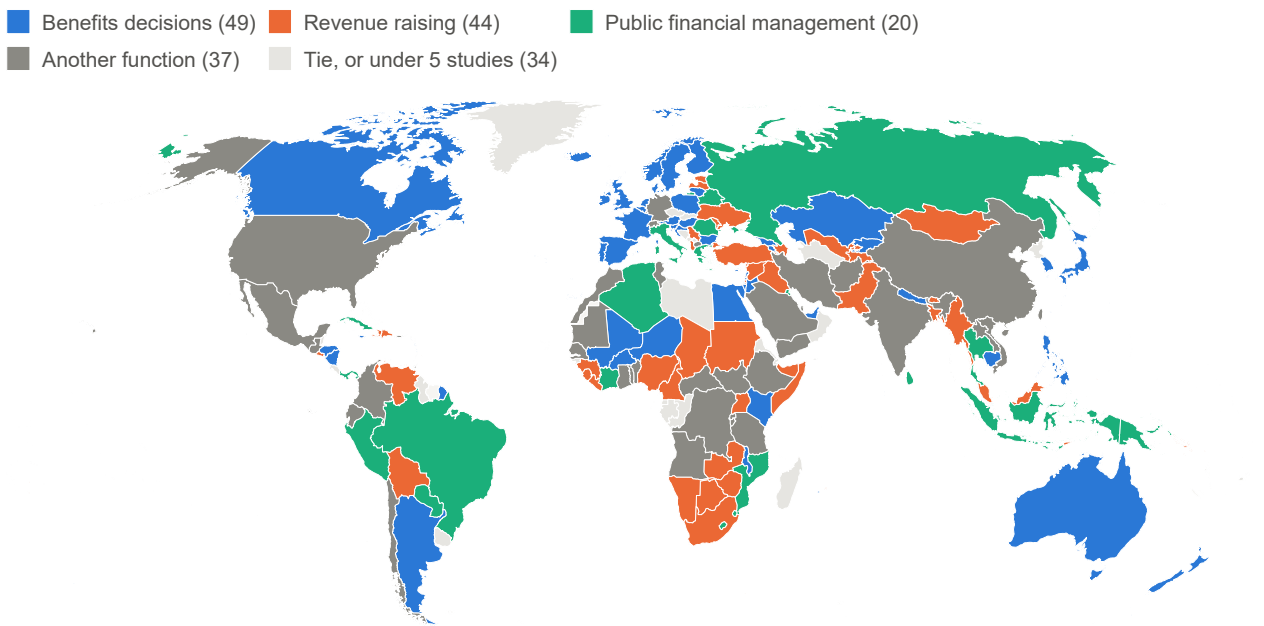

8%
investigate financial protection as an outcome

64%
open access

35%
focus on low- and middle-income countries

The evidence base covers 184 of the 185 countries and territories in the country data: 44,248 of the 53,411 studies name at least one country, giving 47,693 study-country pairs (a study naming several countries counts in each). In the map, 150 countries have a clear leading financing function, 14 have a tie and 20 have fewer than 5 function-tagged studies.

A Financing function studied most often, by country (n = 47,693 study-country pairs)

HFF dataset v2.5.1, studies published 2010-2026 (2026 is incomplete). Map: each country takes the financing function tagged most often among the studies naming it; numbers in brackets are countries. A study can address several functions; 'Other' and 'Unclear' tags are left out. 'Another function': pooling, financing system as a whole, purchasing or supply-chain financing. 'Under 5 studies': fewer than 5 function-tagged studies. Palest grey: no study naming the country, or outside the country data. Open access: share of studies with a DOI (OpenAlex). Low- and middle-income: share of studies naming a country that name at least one (World Bank income groups).
