Profile of studies by WHO region

25%
of function-tagged studies address benefits decisions, the most studied

8%
investigate financial protection as an outcome

99%
of countries named by at least one study by 2025

Studies naming countries in several regions count in each. Dots: share of the region's function tags in each group, one dot = 1% ('Another function' = pooling, financing system as a whole, purchasing or supply-chain financing); a study can address several functions. Top three: share of the region's function-tagged studies addressing each function. Financial protection bar: share of the region's studies with financial protection among their outcomes, on a 0-25% scale; orange marker: all studies (8%). Trends: cumulative share of the region's countries with at least one study (solid) or two or more (dashed); grey: all regions, at least one; 2026 is left out as incomplete. 'Other' and 'Unclear' function tags are left out throughout.
