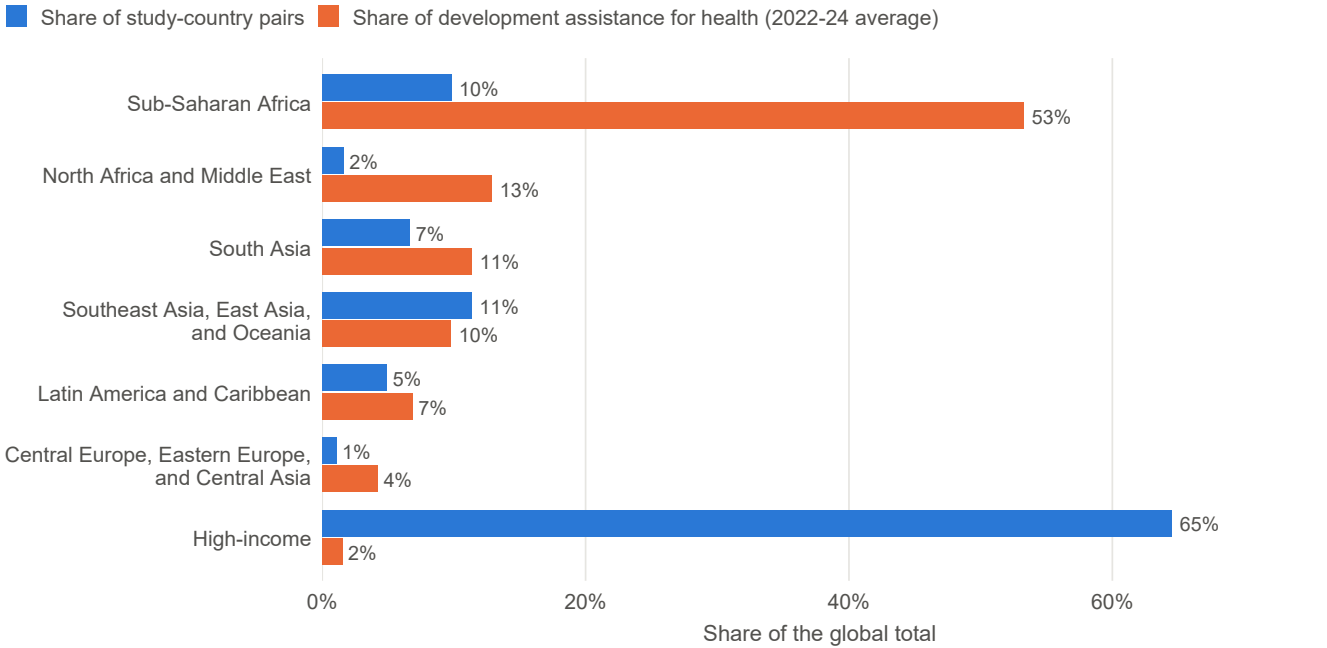
How regional shares of health aid and research compare



Sub-Saharan Africa receives 53% of development assistance for health but accounts for 10% of study-country pairs; the two are different measures and need not match. Regions are IHME's GBD super-regions, approximated by current (FY2027) World Bank income group and then UN M49 sub-region (not WHO regions). Aid: IHME Financing Global Health, 2022-24 average. Research: 47,693 study-country pairs; each study counts once in each country it names.
