The evidence at a glance

53,411
studies, 2010-2026

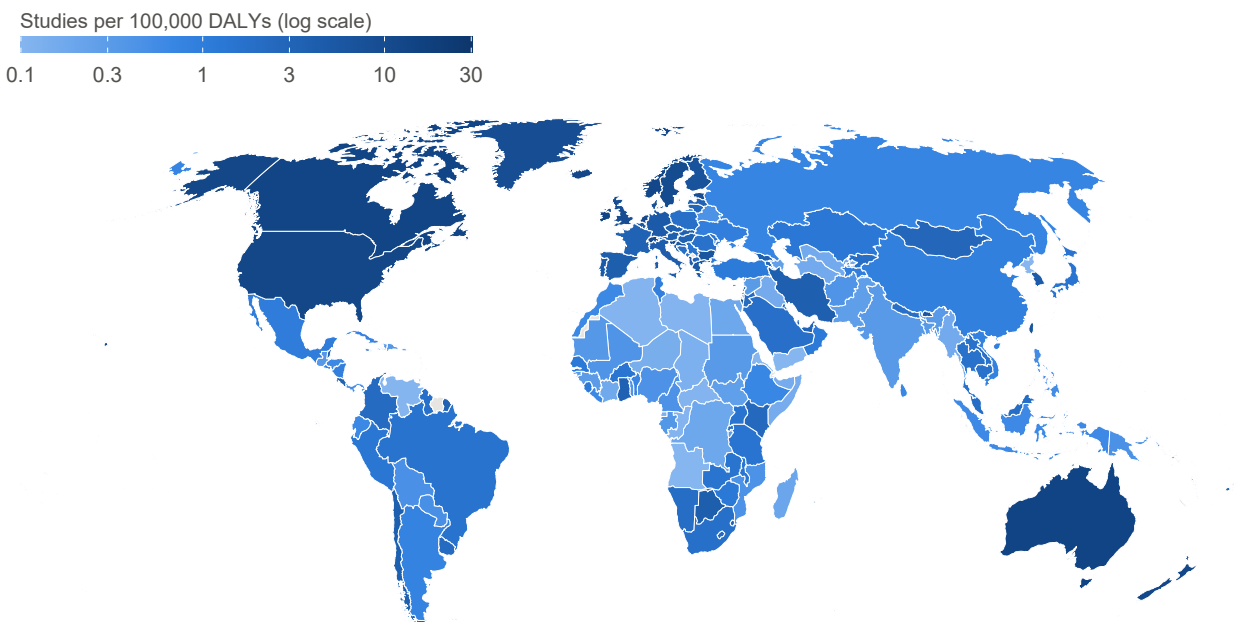

198
countries or territories with at least one study

11%
investigate financial protection as an outcome

64%
open access

35%
focus on low- and middle-income countries

Geographic distribution of health financing studies (n = 47,488 study-country pairs)

HFF dataset v2.5.1, studies published 2010-2026 (2026 is incomplete). Map: studies naming each country per 100,000 disability-adjusted life years (DALYs, GBD 2023), for the 182 countries with at least one study and burden data; a study naming several countries counts in each. Log scale; values below 0.1 or above 30 take the end colours. Grey: no study naming the country, no burden data (Hong Kong, Kosovo) or outside the country data. Open access: share of studies with a DOI (OpenAlex). Financial protection: share of the 41,309 studies with an outcome domain other than 'Unclear'. Low- and middle-income: share of studies naming a country that name at least one (World Bank income groups).
