Profile of studies by WHO region

25%

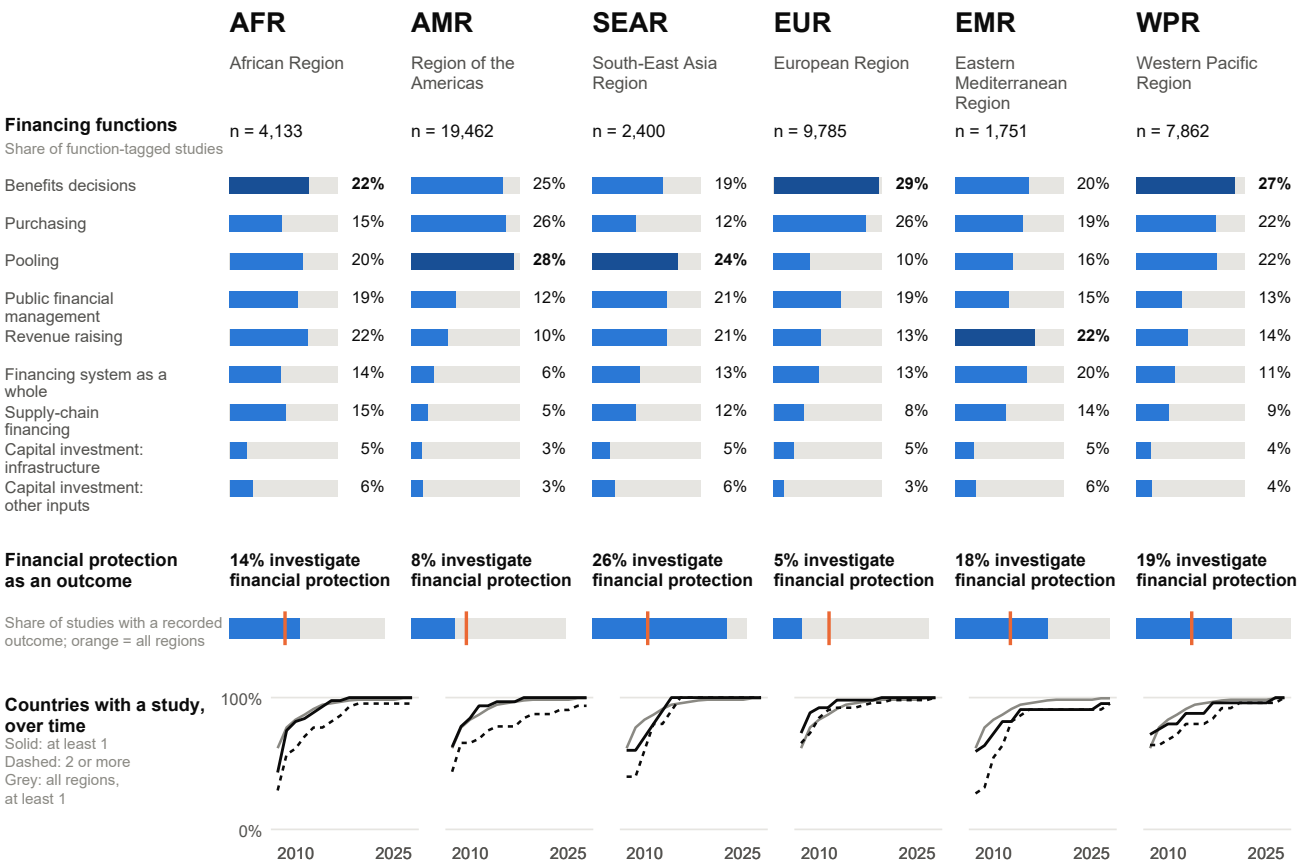
of function-tagged studies address benefits decisions, the most studied

11%

investigate financial protection as an outcome

99%

of countries named by at least one study by 2025



Studies naming countries in several regions count in each. Financing functions: share of the region's function-tagged studies addressing each function, on a 0-30% scale (darker bar and bold = the function studied most); a study can address several functions, so a region's shares sum to more than 100%. Financial protection: share of the region's studies with a recorded outcome (an outcome domain other than 'Unclear'; 41,309 studies in all) that examine financial protection, on a 0-30% scale; orange marker: all such studies (11%). Trends: cumulative share of the region's countries with at least one study (solid) or two or more (dashed); grey: all regions, at least one; 2026 is left out as incomplete. 'Other' and 'Unclear' function tags are left out throughout.
